Safety of Fairgrounds and Amusement Parks

Inspections and certification of children's playgrounds, ski lifts, slides, and sport facilities

Your challenges

Safety is always our number one priority, since even the most minor shortcomings can have fatal consequences for human health. Therefore, the safety of installations and equipment at children's playgrounds, whether for public or private use, is subject to strict legislation, without which such facilities cannot be operated.

How can we help you?

The aim of TÜV SÜD is not only to provide an objective assessment of the level of operational risks, but also to avoid accidents caused by the design of playgrounds and other facilities. Experts at TÜV SÜD are accredited to conduct inspections and certifications for fairgrounds and amusement parks, which include children's playgrounds (including the testing of impact-absorbing surfaces), ski lifts, water slides, sport equipment on wheels, stands, children's inflatable devices, slides, etc. We are also accredited for permanent fitness equipment for outdoor use and equipment for playgrounds.

Our Services

Our experienced inspectors will offer help to manufacturers, suppliers, and operators of fairgrounds and amusement parks, from proposal to introduction onto the market, including regular inspections.

■ Inspection of each playground

The initial inspection of the condition of the playground will be performed on site by an authorised person, pursuant to Government Regulation 173/1997 Coll. and related standards, for the purpose of evaluating safety in relation to occurring risks. During the inspection, regular visual checks will be carried out, along with checks of documentation, but additional tests can also be performed, such as chemical, physical, and/or mechanical tests.

■ Inspection of a particular type of product – gaming element

Assessment of the condition of a type of product based on a sample by an authorised person for the purpose of evaluating safety and risks. Inspections

will always be conducted in person, including checks of documentation (accompanying technical documentation, determination of endurance, sketches, compositions, documentation for purchased components, etc) in accordance with the Government Regulation and related standards. Within one year from the date when the product is placed on the market, regular testing and inspection will be performed in the form of yearly main inspections, in order to prevent injuries caused by use of equipment and/or facilities.

■ Checks

Checks will be performed once annually (unless otherwise required by the manufacturer) to determine the overall level of safety of equipment, foundations, and surfaces, as well as following any changes made based on adopted safety measures, weather effects, and/or signs of deterioration or corrosion.

■ Certification of the game element as a product

Services of independent certification of products for European public game equipment and surface materials.

Confirmation of certification of the parties involved documenting fulfilment of the following standards: EN 1176, parts 1 to 7, 10, and 11, and EN 1177.

Benefits for your business

- A comprehensive offering of testing and certification services tailored to all of your company's needs.
- Timely identification of potential problems at the very beginning.
- Ensurance of compliance with comprehensive safety requirements and criteria.

Why choose TÜV SÜD?

We are the biggest inspection and certification company in the Czech Republic. In view of our widespread representation, we are able to carry out initial, operating, and/or yearly inspections throughout the Czech Republic tailored to your requirements. We are also authorised to carry out evaluation of compliance as an authorised party, and we ensure fulfilment of your needs with a comprehensive offering of inspection, testing, and certification services.

Add value. Inspire trust.
